

# Neutralize Threats and Eliminate Security Breaches

## Reduce Risk to Critical Data and Customer Experience

### DATASHEET

## Enzu Security Services

### Built to order, right-sized, security service

The odds of your business being subjected to a crippling DDoS or ransom ware attack are higher than ever. Cybercrime and digital attacks are growing in complexity and the volume is dramatically increasing. The pandemic has put a strain on law enforcement worldwide. The very public Solar Winds global breach in 2020 affected thousands of companies and governments. And it does not appear “Beserk Bear” and ‘Cozy Bear” will see justice anytime soon. More than ever the lack of a cyber-security strategy threatens the livelihood of many businesses around the world.

### Manage Cyber Threats Easily

Digital thieves can gather great technical resources. They attack hundreds of businesses at a time by overloading their IP addresses with malicious traffic often paving way for an even more damaging cybercrime like sending emails with trojan code. With over 30,000 attacks daily, every business is a potential target. That’s why Enzu network experts utilize a proven global security strategy that lowers risk of large-scale DDoS and ransom ware attacks before they reach our customer’s data infrastructure.

### Know You Are Protected 7x24x365

Ensuring a successful cloud infrastructure starts with a secure foundation. Enzu utilizes powerful DDoS mitigation technology to keep workstream and application environments running smoothly without disruption of service. Enzu Security Services ensures data is protected and encrypted in flight and at rest to ensure the highest quality of service is uninterrupted and secure.

### Fend off Attacks

Ensure the integrity of your data and continuity of business operations with Enzu Security Services.

Right sized infrastructure

Transparent, predicable pricing

- ⊙ Layer 4-7 protection
- ⊙ 100+ Gbps capacity
- ⊙ Instant protection
- ⊙ Global availability

## Always On, Dynamic Protection

We protect our global network of data centers with advanced monitoring, detection and mitigation technology that filters malicious traffic, so our customers only receive clean traffic. You can avoid unpredictable costs and risks from malicious cyberattacks and spikes of your traffic bandwidth across your entire digital infrastructure.

### Benefits of Enzu Security Services

- Non-disruptive Layer 4-7 global protection won't interfere with business or customer operations
- Fast – operates in real time to eliminate threats and drive more positive business outcomes from cloud investments
- Global coverage – tens of data centers on 4 continents to choose from can protect all workstreams, applications and data from attacks and scale with your business

**Figure 1. Actual DDoS Attack and After Mitigation: Over 50 Gbps Reduced to 500 Kbps Clean Traffic in Real Time**
